How to Access the Lauterbach TRACE32 PRACTICE Start-Up and Demo Scripts

2026-06-19 - Comments (2) - PRACTICE

The Lauterbach TRACE32® PRACTICE demo scripts are a collection of example scripts provided to help users understand and work with TRACE32 features more effectively. They demonstrate common debugging workflows, automation techniques, and typical use cases within the TRACE32 environment.

These demo scripts are included in every TRACE32 software installation and are also available through the customer portal as part of the standard software packages and updates.

If you have difficulty locating a specific script or require an updated version for your use case, Lauterbach Support can assist you.

This is completely wrong. The startup scripts are neither available under old address (repo) nor under the link provided in this article nor is this possible to provide this huge amount of information as a part of the software package. The decision to hide these scripts from customers was simply not really thoughtful.

Hello Viktor,

thank you for your feedback. The startup scripts are not available anymore under the old (repo) address. This is not contradictory with the article. You can download the scripts as part of a full software package form https://www.lauterbach.com/trace32-download after login.

You can also receive the scripts as part of software update packages which can be generated by the Lauterbach support team. Please create in this case a support ticket under support.lauterbach.com/new-ticket and provide the serial number of your Lauterbach tools as well as the target processor architecture(s) you are using and which scripts you exactly need.

Regards,

Khaled
