bcm56170 failing to reprogram SPI **Awaiting Agent**

- RB Renaud Barbier
- **Forum name:** #Debugging

I have a Broadcom eval board (BCM95170 rev A0). I have created a SPI CMM programming script derived from the BCM53344-cpi.cmm file. I am able to program the SPI using the Lauterbach when a booted U-boot is running.

However, I am not able to attach (SYSTEM.Mode.Attach) afterwards as my new U-boot image fails to fully boot and therefore cannot update the SPI.

Any idea how stop the CPU?
