Custom Algorithm Flash for CortexM0 Open Discussion

- p pratap
- **Forum name:** #Other Use Cases

I was experimenting with a new flash on new CortexM0+ powered board, so planning write my own algorithm, can you provide me with a brief description about the template that should be followed including arguments and procedure to state how to link those routines to command line FLASH.erase and FLASH.target

Utilizing the ARM template from Lauterbach can aid in developing your flash algorithm. However, sharing it directly may not benefit the community.

In such cases, I recommend that customers submit a ticket via https://support.lauterbach.com/tickets for personalized assistance.
