Installing TRACE32 on Ubuntu Linux machine

- Helpdesk robot
- **Forum name:** #Other Use Cases

Hello, I am trying to install TRACE32 on UBUNTU linux machine. I did the installation part following the user guide, after running the command to start the TRACE32:

/home/gena/t32/bin/pc_linux64/t32marm -c /home/gena/t32/config_usb.t32

I got the follwing ERROR mesage:

/home/gena/t32/bin/pc_linux64/t32marm: error while loading shared libraries: libXp.so.6: cannot open shared object file: No such file or directory

Could you please help me to resolve the issue?

Thanks!

Hello Genady, which TRACE32 version are you using? You can get the version by running "bin/pc_linux64/t32version t32marm" Regards, Khaled

Hi Khaled, I ran the specified command by you to extract the TRACE32 SW version. The output is: Sw.Version: R.2014.09.000058270 (Release Sep 2014)

My debugger supports only the specified TRACE32 version. The TRACE32 SW installed on Ubuntu 22.04.2 LTS

This library is not used any more by newer TRACE32 versions. You can either try to install it or use the qt version (t32marm-qt)
