Hello Lauterbach

Is RLM the only license management tool for Debugging via Calibration Tools (XCP)?

Can i use other tool?

To use the debugging via XCP, you should have a Back-End and Front-End floating licenses and both of them are architecture specific (tailored to the architecture you intend to debug).

For more information, please refer to

https://www.lauterbach.com/products/software/debugging-via-xcp

Additionally, For this, you will also need to set up a RLM license server .

For more details, please refer to https://repo.lauterbach.com/software_only.html

Dear Maryam Kammoun if i have no RLM License server software on my pc, Has it become a

standalone version?
