[RH850U2A CSI] Serial Flash Programming failed Awaiting Agent

- D DungNguyen

Dear lauterbach experts,
Currently I'm trying to use the TRACE32 to update the option bytes of RH850U2A according to
rh850_serialflashprog.cmm demo (with debug port type CSI). But SYStem.Mode Prepare always report the error
"debug port failed" so I could not do anything else.
For debug port type LPD4, I can run SYStem.Mode Up successfully and flash SW.
Please help me review if anything needs to be prepared to run Serial Flashing Mode.
Thank you so much!
