- **Forum name:** #Board Bring-Up

Hi Team,
While Software application flashing to target board, I am getting 'flash program error. '
The processor is in locked up state and I have attached the error log.
Could you please give suggestion to recover from this scenario?

Regards,
Sheeba

Hello, You can refer to this article:
https://support.lauterbach.com/kb/articles/arm-what-is-the-meaning-of-the-state-displays-between-after-running
Otherwise, we need more informations. What is your target (Borad, CPU, flash...)? What script are you using to flash? Do you have other error message in the Area window? What is your TRACE32 version?
