- **Forum name:** #Debugging

Do you have reset and load scripts for TI J784S4 HS-FS MCU R5F device?
Please do not mess up this request with my other request. This is for a different project.

Hello Jim, Our current scripts are not High Security (HS) aware; however, support can be added. I assume you are using an evaluation board and are interested in debugging the device management cores (R5F MCU). Please let us know if you intend to debug other cores or if you are working with a custom board. It would also be helpful to understand your specific use cases. Best regards, Ahmed Ghribi

I need both, I have other requests to work on TI J784S4 EVM board, and this request I am asking for scripts that can be used on HS-FS device. Those are for 2 different projects

Hello Jim,

The scripts for TI J784S4 are now High Security (HS) aware.
