Secure debug connection with S32kxx MCU series based on secure Challenge/response authentication **Awaiting Agent**

- PJ Pawan Singh Jadaun
- **Forum name:** #Debugging

Hello,

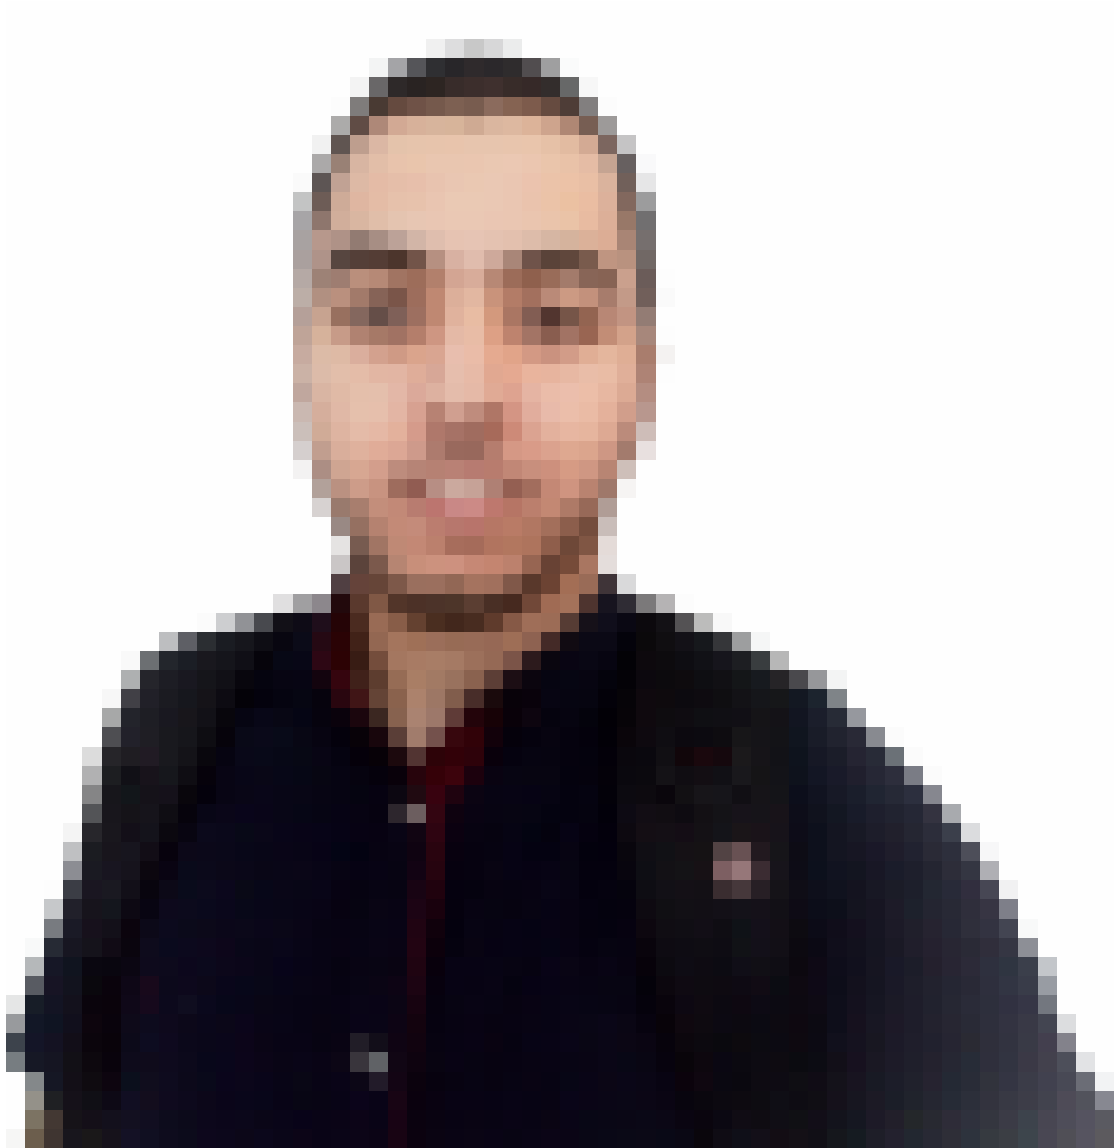

we want to implement the secure debug configuration at lauterbach side to debug the S32kxx series securely.

We want to use challenge/response method to authenticate the jtag before start debugging. could you please share us some document on this and procedure to implement the secure debug functionality on lauterbach?

Thanks and Regards
