Secure Debug Controller on Freeway LS1046A Open Discussion

- FI Faizanbaig Inamdar
- **Forum name:** #Other Use Cases

Hi,

I want to test Secure Debug Contr Functionality on Freeway LS1046A board . For this purpose I have Successfully fused Secure Debug Challenge and Response Value on Freeway LS1046A.
But Trace32 is not prompting me with any Challenge . I am able to Boot and Write to RAM.

It would be of great help if someone provides me information with How Challenge is asked and How it should be responded on Trace32.

Let me know if I am missing anything.
Regards,
Faizan Inamdar

Hi, I'm also interested in using my Lauterbach to debug my secured LS1046a board. Was this solved? Can instructions be provided?
