t32mppc64.exe in command line Awaiting Agent

This was probably asked before, but I couldn't find it.
I'd like to program my images in the command line. The script is approximately like this:

./bin/windows64/t32mppc64.exe -c ./config_P1.t32 -s flash_binaries_cmd.cmm img1.BIN img2.BIN

However, this call returns immediately, it opens a new Trace32 window and all the output goes there. Is it possible to configure t32mppc64.exe so that it blocks until flash_binaries_cmd.cmm is done and all the output goes into the shell it was called from?
