TC389QP HSM Only debugging environment Awaiting Agent

- BP Bilal Parvez

I would to know if there are any lauterbach demo scripts available to debug only the Cortex M (HSM) core on the TC389QP device without starting the Aurix (Application) core.

As I cannot find out in the installation folder in the Trace32 software that I have currently(R.2023.02.000159199).
