Trace32 IDE crashes as soon as we load ARTI configuration file

- MG Madhusudan Gupta
- **Forum name:** #Trace Analysis

We are loading executable (.elf) which is built with ARTI Hooks (ARTI.c & ARTI.h).

After loading this .elf we are stopping the control in one of the Os Task.

Now as soon as we load the ARTI configuration file via command line by giving following command, Trace IDE is getting crashed and closing automatically.

TASK.ARTI

Requesting help in this regard to understand where is the gap.

My understanding is that it should not crashed, and if there is any problem anywhere in ARTI files, it should highlight the error with line number.

Exception handling needs an improvement in Trace S/W IDE.

Thanks

In description of this ticket, Community forum system not accepted command statement. I am re writing this command as follows for loading ARTI Configuration file. TASK.ARTI Full_File_Path_of_ARTI_Configuration_file.arxml
