Trace32 Screenshot capturing issue Open Discussion

- B Bharath
- **Forum name:** #Other Use Cases

We are encountering a problem with capturing screenshots using the latest version of Trace32 software on our Windows 11-upgraded laptops. Specifically, when we use the Trace32 command [Screenshot "Path" format] to take screenshots, the Trace32 windows appear grayed out in the captured images, even though they display content normally on the screen.

Please provide any guidance on resolving this issue.

Hello, we are working on this issue. Please use as a temporary workaround the Windows 11 screen capture feature.
