Transfer of licence from one cable to another Open Discussion

- **Forum name:** #Other Use Cases

We have a cable with updated Cortex A/R/M licences. However, it does not work with updated version of Trace32. The only solution recommended by the Indian expert is to send the cable to Germany for repair. However, this repair will cost us, est USD450/-.
We have a few spare cables which have the A/R/M licences, but not updated. So instead, to save costs, is it possible to transfer the valid licence from the faulty cable to the spare cable?
