Watch variable while running for ARM/Zynq-7000 Awaiting Agent

- CN Csaba Nemes
- Forum name: #Debugging

Hello, I have a Xilinx Zynq-7000 device, and I would like to watch a variable in Trace32 realtime, while the target is running.

I have configured the memaccess like so:

SYStem.MemAccess.DAP

I have also tried the %E switch:

Var.View %E my variable

However, it does not work. When the %E is applied, the value is always 0, without the %E it only works when I break the execution.

What am I missing? Thanks.

Hello, To ensure a proper support of this core, please open a new ticket:

"https://support.lauterbach.com/new-ticket" and send the script you are using, a screenshot of the mentioned Var.Watch window and please generate a system information report about your TRACE32 configuration by selecting the TRACE32 menu 'Help' > 'Support' > 'System Information...', click 'Save to File' and send the resulting text file as an attachment to your e-

mail. Best Regards, Oussema
