Can I download an old TRACE32 release?

2026-04-03 - Comments (2) - Setup / update

The latest TRACE32 release is available for download either from the Lauterbach Customer Portal or through the TRACE32 Software Updater. To use this release without a demo time limitation, a valid software warranty is required.

If you would like to evaluate the latest version before extending your warranty, we offer a one-time temporary software warranty key valid for four weeks. You can retrieve this key here. Refer for more information to How can I program a temporary software warranty license?

The two previous TRACE32 release versions are also available for download from the Lauterbach Customer Portal.

Please note that older TRACE32 versions are no longer available for download.

If you have any further questions, feel free to submit a support ticket.

Hi all Would it be possible to get a download link for the trace32 01/2024 release? We are still using 02/2022 release, but our licence is valid until 01/2024 release. Thank you for short answer.

If the only reason is the license validity, the license would need to be updated in order to use newer releases.
