Can I revert an updated installation back?

2024-11-26 - Comments (0) - Setup / update

Yes. The TRACE32 Software Updater moves all updated files to a backup directory (/backup/). In order to revert the update, move all files from the backup folder back to the system directory recursively. As the TRACE32 Software Updater only makes a backup of the updated files, overwrite the new files with the ones from the backup directory.
