## Can messages in TRACE32 PowerView be redirected to the console?

2025-12-04 - Comments (0) - PRACTICE

Yes, you can redirect messages to the console using the AREA.STDOUT command.

For example, to redirect messages from the default  $AREA\ A000$  to STDOUT , use:

AREA.STDOUT A000

This will ensure that all messages printed to the standard AREA window, including system and error messages, are also displayed in the console from which TRACE32 PowerView was started.

For more details, refer to **PowerView Command Reference**
