Can TRACE32 support pretty printing for C++ STL?

2023-10-24 - Comments (0) - TRACE32 PowerView

Yes, using the commands sYmbol.AddInfo.Type and Var.OBJECT.

- You can define the STL container type using the **sYmbol.AddInfo.Type**
- New entry "View Object in Window" is added then to the variable pull down menu
- Var.OBJECT can display the container in a human-readable form
- Added type information could be more complicated with if/else/while expressions
- Refer for more information to demo/etc/stl
