Does TRACE32 support the Rust programming language?

2026-08-13 - Comments (0) - TRACE32 PowerView

Yes, TRACE32 PowerView includes basic support for the Rust programming language. This support has been successfully tested with various Rust examples. If you encounter any issues while working with Rust, we encourage you to report them, as further development and enhancements will be considered based on customer feedback.

Please note that TRACE32 does not have a Rust-specific expression parser in the TRACE32 command line. Instead, the C++ parser is used to evaluate Rust expressions.
