How can I improve the FLASH programming time?

2022-06-03 - Comments (0) - Flash programming

- Use **FLASH.ReProgram** command group instead of **FLASH.Program** / **FLASH.AUTO** .
- Use the **/DualPort** option if possible. See "**DualPort FLASH Programming** " in [Onchip/NOR FLASH Programming User's Guide](#).
- Close all TRACE32 memory dump windows during FLASH programming.
- Increase the JTAG clock if possible.
- Use target controlled FLASH programming method when available instead of tool based method.

Refer to the document [Onchip/NOR FLASH Programming User's Guide](#) for more information.
