How can I perform a factory reset of the PowerDebug X51?

2026-05-23 - [Comments \(0\)](#) - [Setup / update](#)

For technical reasons, PowerDebug X51 stores some configuration settings (e.g. the device name) in a way that does not guarantee that old data is erased immediately, even if changed by the user.

To ensure that all user-specific data is removed reliably, you can perform a factory reset.

For details on performing a factory reset, please see the `DebugModule.FactoryRESet` command in the [PowerView Command Reference](#).
