How to put a breakpoint on a specific source code line from a PRACTICE script?

2022-01-10 - Comments (0) - PRACTICE

You can use the following syntax to set e.g. a breakpoint at line 42 of the file myfile.c located under c:\t32\myproject\ :

```
Break.Set \'c:\t32\myproject\myfile.c'\42
```

or simply:

```
Break.Set \myfile\42
```
