Is it possible to do real time analysis of the trace data through an external application?

2026-08-13 - [Comments \(0\)](#) - [Tracing](#)

Yes. If you want to perform your own analysis of trace data in real time, you can use the trace in **PIPE** mode.

PIPE mode allows trace data to be transferred on the fly to a user-specific application while trace recording is active.

The trace data is exported through a named pipe to another application, which can then perform custom processing.

The following commands can be used to configure PIPE mode:

```
Trace.Mode PIPE ; Set the PIPE mode
Trace.PipeWRITE \\.\pipe\ ; Connect to named pipe (Windows)
Trace.PipeWRITE ; Disconnect from named pipe
```

A demo is available in the TRACE32 installation under

demo/arm/combiprobe/stm32f103/pipeproto
