## [Linux] "Communication with Acrobat Reader failed"

2022-01-12 - Comments (0) - Setup / update

If you use an Acrobat Reader version higher than 7 on a Linux host, you might receive the error message:

**"Communication with Acrobat Reader failed - check if plugin <trace32.api> is started correctly"**

In such case, you need to update the plugin **trace32.api** on your host.

The newest plugin version is also available at the download link below:
