[Linux] "rcu_sched detected stalls on CPUs/tasks..."

2026-08-11 - Comments (0) - OS-aware debugging

The kernel includes an RCU stall detection. You get this warning if you stop the program execution longer than the RCU timeout (`CONFIG_RCU_CPU_STALL_TIMEOUT`). You can disable this detection by writing the value 1 to the kernel variable `rcu_cpu_stall_suppess` :

```
Var.set rcu_cpu_stall_suppress = 1
```
