Warning of a deprecated "t32m*-qt TRACE32 executable

2025-05-23 - Comments (0) - Setup / update

Under Linux there were two executables for each architecture: "t32m*" and "t32m*-qt" in the past (before 29 June 2019).
With the new shared library mechanism, "t32m*-qt" is replaced by a notification bash script.

If you get a warning after a TRACE32 software update like **Warning: starting /home/t32/bin/pc_linux/t32marm-qt is deprecated**, see
https://www.lauterbach.com/3737

Please replace the executable name "t32m*-qt" by the corresponding name "t32m*" (without " -qt ") in your start script or command line.
