

Regenerating coverage information after changing metric?

2022-01-12 - Comments (0) - Code coverage

The coverage information is processed at the same time for all coverage metrics using the command **COverage.ADD**. The displayed metric can be changed after executing this command

To change the displayed metric, either execute **COverage.Option.SourceMetric < metric >** (e.g. **COverage.Option.SourceMetric Statement**) or set the metric in the **COverage.state** window.

Please refer for more information to the documentation of the COverage commands in [General Command Reference Guide C](#) and to the [Application Note for Trace-Based Code Coverage](#).
