Why are suffixes such as .isra, .constprop, or .part added to symbols?

2026-07-30 - Comments (0) - TRACE32 PowerView

These suffixes are introduced by **Link Time Optimization (LTO)**, which appends identifiers like `.isra`, `.constprop`, or `.part` to certain symbols during compilation. If you prefer to avoid these suffixes, you can try disabling LTO. Alternatively, you may use the `sYmbol.ForEach` command to list all symbols with specific suffixes. For detailed usage instructions, refer to the General Commands Reference Guide S
