## [TriCore] My CPU is no longer hold in SYStem.Mode Down after installing version 2018.01.0000092477 or newer.

2022-01-11 - Comments (0) - TriCore

The behavior of **SYStem.Mode Down** was changed in version S.2018.01.0000092378.

Now, the debug port is tristated and reset is no longer activated.

The old behavior can be restored by adding **SYStem.Option DOWNMODE ReSeT** to one of your start-up scripts (see "Automatic Start-up Scripts" in the [PRACTICE Script Language User's Guide](#)).
