UTF-8 characters are garbled in the TRACE32 List window when displaying C source code. How can this be resolved?

2026-11-10 - Comments (0) - TRACE32 PowerView

- TRACE32 releases `R.2022.02` and earlier do not fully support UTF-8-encoded source files and may display certain non-ASCII characters incorrectly or as garbled text.

- TRACE32 releases `R.2022.09` and later provide improved support for UTF-8-encoded source files.

Therefore, upgrading to the latest TRACE32 release is recommended. If upgrading to the latest release is not possible, use at least TRACE32 release `R.2022.09`.
