When using Floating License, RLM fails to start and reports No ISV servers to start. What should I check?

2026-11-10 - Comments (0) - Setup / update

Check the following:

- Verify that the current user has read and write permissions for the license file. As a simple test of write permissions, open the `.lic` file in a text editor, add a space, and save it again.
- Avoid non-ASCII characters and spaces in the directory containing the RLM executable as well as in the directory containing the license file.
